Filters for grounds

PS Series vacuum chambers are designed to load roasted beans without damage. The combination of the gentle entry with a tangential inlet and a bean decelerator protects the beans from damage.

The internal fines separator reduces the need for filter cleaning above a roaster or packaging machine..

PS14 Vacuum chambers have capacity of 1.4 cubic feet, capable of loading 50 pounds of green beans. PS14 chambers are suitable for conveying up to 2000 pounds per hour.

All PS series chambers are designed to convey dark roasted beans without damage.

You can insert a section for filtering grounds. Grounds are considered powder and must be filtered in the chamber to prevent loss of product and dust. Our filters are designed to convey fine grounds with long periods between filter maintenance. Some roasters by multiple filter sections for flavored coffee.

RemoteVac Hopper Loader

Loaders for grounds, green and roasted beans

Choose your Vacuum Pump

RemoteVac

Convey up to 2400 pounds per hour.
Convey up to 100 feet.

- Very quiet operation >76 db
- Your roastery will be dust free.
- Floor level filter
- Ametek long life motor
- Small foot print
- Plugs into a standard wall socket.
- Low cost

Regenerative Blower

Convey up to 3000 pounds per hour.
Convey up to 500 feet.

- Long life 3 phase motor
- High vacuum power
- Separate cyclonic dust collector
- Very large holding capacity
- Vacuum breaker valve
- Vacuum relief valve

Never clean a felt filter over a roaster again!

RemoteVac Hopper Loader

Choose your Control

RemoteVac PLC Control

Full featured PLC Control

- On/Off circuit breaker
- Plc based Control
- Plain English display
- Adjustable load and dump time
- Filter pulse cleaning control
- Two material valve control
- Purge valve control

PLC Software

Standard software loads continuously until the hopper is filled. A compressed air valve is included to reversing the air flow to the chamber to clean the filter. All set-points are fully adjustable via a plain English LED display.

Green bean software loads for a set number of cycles with different time settings. That allows you to load an entire roast when there is limited room in the roaster hopper for green beans under the loader.

Special software is provided when needed. We can turn the grinder on and off, control grounds fluidizers and vibrators. Special operational sequences can also be provided. We have provided roasting cycle controls that unload the roaster, conveying the beans to a grinder then automatically conveying the grinds to a hopper for off-gassing.

Choose your accessories

Roasted bean decelerator.

A roasted bean decelerator is a length of pipe that is significantly larger than the convey line. The sudden deceleration slows the beans down before they enter the chamber. Increasing a 2inch line to 3 inches will slow the beans almost 50%.

Dust Collectors

If you have excessive dust these cyclonic dust collectors are the answer. They feature a double cyclonic design with a large holding capacity.

**If you need something special give us a call.
We offer many options not shown here and we frequently make custom systems.**

Custom lids for roasters, grinders and weigh-fills.

We can provide custom lids and hanging systems to match your roaster, grinder or weigh-fill. WE can match any hopper and you can avoid the high prices charged by manufacturers.

Stainless steel adjustable wands.

Our wand can solve problems other cannot. The standard wand is fully adjustable. For difficult material we can add vibrators and fluidizers.

More products to use with your loader.

Fluid Bed DeStoners to
match your cooler

Custom fit fluidized de-stoners will remove even the smallest stones. use with your RemoteVac loader to transfer beans to a hopper, grinders or weigh-fill. You can convey up to 40 feet without breaking beans. Available for up to 60K roasters or more if you convey to a grinder.

DeStoner Bin

Place a DeStoner Bin next to your weigh-fill and you can de-stone and fill the weigh-fill at the same time. Just pour your beans into the bin and attach your RemoteVac loader. The DeStoner bin features a fluidized bed system that will remove even the smallest stones.

Hoppers for beans and grounds
that convey every bean.

Conveying hoppers can hold batches of beans for your roaster or blender. The can hold up to 4 bags of green beans. They are also used for filling grinders and weigh-fills. Conveying hoppers are available in a variety of sizes and materials. Convey every last bean.

No more tilting a brute container.

Amazing Quality Great Price!

It will be hard to compare a RemoteVac Loader to any competitor because we offer so many standard features and options. Our competitors cannot match our features at any price.
